Dallas County Reports 332 Positive 2019 Novel Coronavirus (COVID-19) Cases

DALLAS -- As of 2:00 pm August 23, 2020, Dallas County Health and Human Services is reporting 332 additional confirmed cases of 2019 novel coronavirus (COVID-19), bringing the total confirmed case count in Dallas County to 68,904, including 857 confirmed deaths. The total number of probable cases in Dallas County is 2,574, including 8 probable deaths from COVID-19. Of the 332 new cases we are reporting today, 93 came through the Texas Department of State Health Services' (DSHS) electronic laboratory reporting (ELR) system, with the majority from April, May and June. Please see a provisional breakdown below of these newly reported cases by date of collection:

Month	# of positive patients
March	5
April	31
May	22
June	32
July	3

The additional 2 deaths being reported today include the following:

- A man in his 60's who was a resident of the City of Grand Prairie. He had been critically ill in an area hospital, and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Mesquite. He had been critically ill in an area hospital, and had underlying high risk health conditions.

From August 1st to 14th, 531 school-aged children between 5 to 18 years of age were reported to have been diagnosed with confirmed COVID-19. About 50% of these cases were high school age. By zip code of residence, 302 (57%) of these children were projected to have been enrolled in Dallas ISD schools.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. The 7-day average daily new confirmed and probable COVID-19 cases (by date of test collection) for CDC week 33 was 256.

The percentage of respiratory specimens testing positive for SARS-CoV-2 has been declining but remains high, with about 12.5% of symptomatic patients presenting to area hospitals testing positive in week 33. Of the total confirmed deaths reported to date, about 26% have been associated with long-term care facilities. New cases are being reported as a daily aggregate, with a more detailed summary report updated Tuesdays and Fridays.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators in determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. Due to weekend reporting, new data will be available on Tuesday, August 25, 2020.

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don't live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
